

Tejesvani Muppara Vijayaram

📍 [Boston, MA](#) 📞 [\(857\)-465-9450](#) ✉ mvtejesvani@gmail.com [in](#) [Linkedin](#) [GitHub](#) [Portfolio](#)

Education

Northeastern University, Boston

Sep 2023 - May 2025

MS Data Analytics and Engineering

CGPA: 3.94

Anna University, Tamil Nadu, India

Sep 2017 - May 2021

BE Computer Science Engineering

CGPA: 3.64

Technical Skills

Programming Languages	: Python (NumPy, Pandas, Seaborn, Matplotlib, Scikit-learn), SQL
Data Engineering& ETL	: Apache Airflow, dbt, Snowflake, Kafka, Spark
Analytical Tools	: Tableau, PowerBI, Looker
Cloud & Database	: MySQL, AWS (Glue, Athena, Redshift), GCP(BigQuery)
Developer & Automation Tools	: Git, GitHub Actions, Docker

Work Experience

Data Analyst

Aug 2021 – May 2023

LTIMindtree

Chennai, IN

- Delivered **50+ new features** across eight web applications for insurance clients, enhancing user engagement.
- Optimized Tableau dashboards to provide insights into profitability and risk exposure across five types of policy claims, including Automobile, Property, and Casualty claims, resulting in a 10% improvement in risk management.
- Developed **SQL scripts** for **ad-hoc analysis** and reporting, and created **stored procedures** for complex insurance premium calculations, **reducing query response times** by 30%.
- Implemented **dimensional data models** to efficiently store and retrieve insurance data, supporting over 500K transactions, reducing data redundancy, and improving database performance.
- Automated email reminders for claims processing, accelerating submissions and reducing workflow delays by 13%.
- **Increased customer retention by 15%** by using **Tableau** dashboards to track insurance **KPIs**, including claims processing efficiency and underwriting accuracy, driving data-driven decision-making.

Projects

Bank Marketing Prediction | *GCP, Airflow, Docker, GitHub Actions*

- Developed a scalable MLOps pipeline using Random Forest to predict term deposits from 50K+ financial records.
- Automated data validation and model building using **Airflow** and **Docker**, reducing preprocessing time by 70%.
- Integrated **GitHub Actions** for CI/CD and **MLflow** for model tracking, and deployed the model on **GCP** with real-time monitoring of **data drift**, while achieving an accuracy of 84% with term deposit predictions.

IoT Data Streaming Pipeline | *AWS, Spark, Kafka, ETL*

- Built data streaming pipeline using **Kafka** and **Spark** to process data from 3 IoT sensors(Vehicle, GPS, Weather).
- Refined **ETL process** with **AWS Glue** for data transformation and improved data processing efficiency by 20%.
- Integrated Amazon **S3** and **Redshift** for data storage and optimization, leveraging **Athena** for efficient querying.

Sales and Customer Dashboard | *Python, Tableau, KPI Analysis*

- Restructured retail dataset of 13K records using **Python** for data manipulation and optimized data storage.
- Developed interactive Tableau dashboards with 10+ calculated fields, advanced filters, and parameters to analyze KPIs such as sales and profit metrics, enabling data-driven decision-making to uncover insights on customer behavior.

Customer Segmentation | *Python, RFM Analysis, Predictive Modeling*

- Developed a **customer segmentation model** using **RFM analysis** to identify high-value subscribers and at-risk customers, leading to a 15% improvement in retention strategies.
- Analyzed **subscription trends**, including **acquisitions, churn rates, and renewal patterns**, to optimize **customer lifetime value (LTV)** and built a **predictive model** to forecast churn probability.
